Work faster and smarter with Virtual Private Servers

Virtual Private Servers are perfect for businesses looking for more control, flexibility and performance, but without the investment required for a dedicated server. VPS provide a range of options for businesses looking for an economical solution to meet their growing needs. We have carefully designed multiple VPS configurations to best match the needs of your business requirements.

Features

- Supports multiple OS
- Robust SLA's
- Individual node uptime reliability
- Any application requiring high performance, security, scalability and availability
- Production environments

Savings

- No upfront investment
- Low operating expenses

Protect your data with Backup As A Service

Backup as a Service (BAAS) helps you better protect ever-growing data volumes, efficiently manage information assets, and quickly find, recover and access data. With a truly unified and innovative data management solution you can transform your approach to data protection, allowing you to transcend the limitations of traditional backup and eliminate the complexity brought on by point products.

Features

- No Hardware disaster recovery
- Fast daily backups
- Simple, one-step recovery
- Centralized management and encryption for data security

Savings

- No initial costs
- Operational costs are reduced

Why Businesses move to cloud

Every year more and more businesses are adopting cloud. While traditionally thought of as an IT decision, cloud is increasingly being considered a business decision to enable company functions. Take a look at four reasons why more businesses are adding the cloud to their technology arsenals:

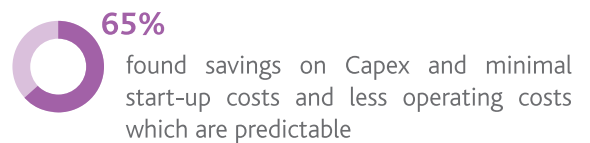

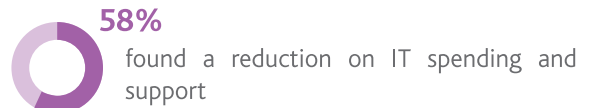

1 It offers better insight and visibility

Businesses are using cloud technology to support their analytics efforts of leading organizations

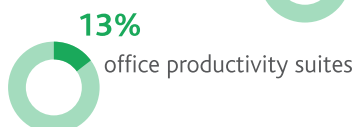

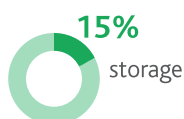

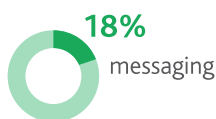

2 Reduction of costs

Using the cloud enables mass-scale computing power & minimizes IT requirements and physical storage, providing significant savings

3 It can support a variety of business needs

Cloud allows work to be accessed from anywhere on multiple devices, making cross-functional collaboration much easier. Here's what leading organizations - cited as popular uses of cloud.

4 It allows for rapid development of new products and services

The Cloud offers businesses valuable capabilities, here's what leading organizations say it enables them to do
